

# Water My Yard Program

<http://WaterMyYard.org>

The Water My Yard Program is an innovative new solution that not only helps homeowners with the difficult question of “How much do I need to water my yard”, but also provides the answer via a weekly email and/or text message.

These messages provide recommendations on how long to run the irrigation system in minutes, and how many times to irrigate each week. The recommendations also consider the amount of rainfall, as well as local watering restrictions.

Homeowners create a customized profile by entering their address, city or zip code. Then, they select their type of irrigation system. It is that easy! For greater accuracy, users can enter the actual precipitation rate of their irrigation system if known.

Following WaterMyYard watering recommendations prevents over-irrigation of yards, irrigation when water is not needed, and helps your municipal water supplies conserve this limited resource.

For more information, see the frequently asked questions section at: <http://WaterMyYard.org>
